I forgot to push the changes I made to the model earlier. So I had to make a new branch called ~~Shaun-is-stupid~~ so I could merge.

02/26/2024

I was in bed sick and throwing up all last week, so I wasn't able to accomplish much. However, we did add in the test plan yesterday.

However, today I worked on tracking Stakeholder needs to requirements and activities in the model to show how they are technical or satisfied in the Problem domain (black and white box). Specifically, I pushed Change for the Flight Control Stakeholder needs, and also had to make a quick change shortly after.

03/02/2024

Today I updated the SRS and SPD. I focused on applying input from previous comments from the team members. We added a lot of figures and text to the SRS and classified some important concepts in the SRS and SPD.

03/04/2024

Tonight we worked on Oct 2nd to last project presentation for capstone. We have been working on the presentation, but tonight we have been doing a comprehensive summary to get the material complete. We mainly had to make the information more graphic and easier to digest for the audience.

03/09/2024

My local github repository is no longer responding on my machine, so I have been forced to reclone the gitlab repo, however, the meetings we had with Katherine earlier this week and last week were all recorded. Because I will be able to download all my changes based on her advice earlier.

However, this upcoming week is spring break, so I do not anticipate us getting much work done.

03/12/2024

Today I had some free time, and took a look at the model Kathryn sent on 02/29. I forgot she sent this because I was busy with other exams, but I'm stuck at the air port and it seems like a good time. One thing of note, is that her model is very detailed, but not complete. Like she has really great exams, but only one of each.

03/27/2024

Today we have met for the first time in a while since Spring break. We have been tinkering with the model, but today we needed to make all of our changes to create a new basecamp copy before we get too disconnected. Also, May and I were on tracking the final stakeholders. Weeds did the model and removing any unnecessary relationships. Lastly Dr. Alvaras told us we needed to focus on making the presentation easier to understand for the audience so we are going to add a map to the slides so the audience knows where we are at during any given part of the presentation.

03/29/2024

We spoke with Dr. Alvaras today about our final changes to the model. She wants our product to be an example for future classes, and she further wants us to present to her current class on Thursday, the 4th of April. Our internal goal is to finish our final presentation by then so we can practice with that.
